Our patented suspension system allows each wheel to move up and down independently smoothing out uneven turf. The deck of the mower works in conjunction with the suspension system to provide a consistent cut. This system virtually eliminates shock to the chassis, resulting in superior operator comfort, increased mowing speeds, stability and extended mower life.

GOLF CARTS

The first use of a motorized cart on a golf course was by JK Wadley of Texarkana, Texas/Arkansas, who saw a three-wheeled electric cart being used in Los Angeles to transport senior citizens to the grocery store. Later, he purchased a cart and found that it worked poorly on a golf course.

The first electric golf cart was custom made in 1932, but did not gain widespread acceptance.

In the 1930s until the 1950s the most widespread use of Golf Carts were for those with disabilities who could not walk far.

By the mid 1950s the Golf Cart had gained wide acceptance with golfers, with several manufactures (e.g. including Victor Adding Machines and Sears and Roebuck) producing various models. Most were electric.
